Professional Summary

Chartered Engineer (India) and Machine Learning Engineer with 8+ years of experience applying **Python, ML, and deep learning models** to engineering and analytics problems. Skilled in **predictive modeling, NLP, computer vision, and data visualization**. Proven success in deploying ML solutions that reduced equipment downtime by 20% and building interactive ML apps for end-users. Certified in **IBM Data Science Professional Certificate** and currently pursuing an **MBA in Business Analytics**, strengthening expertise in data-driven decision-making and AI applications.

Core Skills

- **Machine Learning & AI:** Regression, classification, clustering, recommender systems, predictive analytics
- **Deep Learning:** ANN, CNN, RNN, NLP (text classification, sentiment analysis, image-based fault detection)
- **Gen AI & Agentic AI workflow (RAG applications)**
- **Programming:** Python (pandas, NumPy, scikit-learn, seaborn, matplotlib), Streamlit deployment
- **Data Engineering:** SQL, data transformation, normalization, KPI dashboards
- **Visualization & BI:** Power BI, Tableau, DAX, advanced reporting
- **Tools & Platforms:** GitHub, Streamlit

Professional Experience

Larsen & Toubro (L&T) – Asset Life Cycle Management 2017 – Present

- Designed and deployed **ML models for predictive maintenance**, reducing equipment downtime by **20%**.
- Built **image-based fault detection models (CNN)** and **automated reporting with NLP**.
- Developed and deployed **ML based apps** (classification, regression, recommender systems, clustering) .
- Created **Power BI dashboards** for real-time monitoring of KPIs (utilization, downtime, ROI).
- Partnered with project managers to integrate ML solutions into operational workflows, improving decision-making efficiency.

Projects (Portfolio)

- **Predictive Maintenance ML Model** *Python, scikit-learn, Streamlit* Forecasted equipment failures using regression/classification models, reducing downtime by 20%.
- **Image Fault Detection (CNN)** *Python, TensorFlow/Keras* Designed a CNN model to detect mechanical faults from equipment images, improving fault detection accuracy.
- **Life Expectancy Prediction App** *Python, scikit-learn, Streamlit* Built regression models to predict life expectancy based on socio-economic and health indicators. Deployed as an interactive Streamlit app for real-time predictions.
- **Anime Content-Based Recommender System** *Python, NLP, scikit-learn* Developed a recommender system using content-based filtering and NLP techniques to suggest anime titles based on user preferences.

Education & Certifications

- **MBA in Business Analytics** – Symbiosis, Pune (*Ongoing*)
- **IBM Data Science Professional Certificate**
- **Chartered Engineer Certification** – Institution of Engineers, India
- **B.E. Mechanical Engineering** – Institution of Engineers, India
- **Diploma in Mechanical Engineering** – Govt. Polytechnic Gondia
